Fullstack Web Development Tutorial Lesson 2

Today's lesson will cover

- **Setup Wordpress**

- **Play around some more with browser developer tool**

- **Apply modifications to final website (HTML template and/or Wordpress site)**

Setting up Wordpress

How to setup Wordpress?

- Setup Wordpress locally:

  - On Windows: https://www.wpbeginner.com/wp-tutorials/how-to-create-a-local-wordpress-site-using-xampp/

  - On Mac: https://www.wpbeginner.com/wp-tutorials/how-to-install-wordpress-locally-on-mac-using-mamp/

- Or, use https://www.000webhost.com

To Dos

- Use browser tool to play around page and make changes

- CSS exercise suggestions:

  ○ Change HTML element background color

  ○ Add background image on an element using CSS

  ○ Align content width - make it responsive

  ○ Use CSS grid to organize a list of elements

- Apply changed styles on **Customize > Additional CSS**

- Wordpress dashboard exercises:

  ○ Changing website identity contents using **Customize** options

  ○ Adding multiple pages

  ○ Adding menu

  ○ Remove theme footer branding

  ○ Giving the whole site a refined complete look (Self study assignment)

Refer to https://css-tricks.com/ **for CSS technique details**

Self Study Assignments

To Dos

- Use the HTML dummy page from <u>Lesson 1 Example Folder</u> or any HTML, CSS template of choice and make a PORTFOLIO page of your liking. **SUBMIT BY JUNE 8, 2020!**

- Optional To Do: Design the Wordpress site page to your liking as complete project and add as a project on your portfolio site

- Keep doing freecodecamp lessons
